

800W solar power generation current

Overview

When a unit is marketed as an 800W power station, that number usually refers to the continuous AC inverter output: In North America, most portable power stations output around 120 volts AC. Using the simple formula: An 800W load at 120V draws about 6. The average home uses about 10,000 watts of AC power, so a 1 kilowatt (kw) system will generate about 10 kilowatt-hours (kWh) per day. This is enough to offset the electric usage of a typical U. In other words, a 1 kw system will save you \$30-\$40 per month on your electric.
