

# Battery storage container for commercial buildings

## Overview

---

Containerized Battery Energy Storage Systems, or BESS, are modular, scalable energy storage solutions that integrate batteries, PCS, BMS, EMS, and thermal management within a standard container. A commercial energy storage system allows facilities like businesses, industrial parks, charging stations and virtual power plants (VPP) to control how they use energy, set electricity prices and tackle blackouts in a flexible and smart way. But one of the most important factors in choosing the right solution is understanding BESS container size, including how internal battery rack layout and usable capacity. BESS, or Battery Energy Storage Systems, store electricity and discharge it when needed to keep facility operations running without interruption. These energy storage systems provide backup and typically support critical loads for up to four hours. In a microgrid, batteries become proactive assets. With energy ratings from 200 kWh to multiple MWh, our battery storage options are sure to fit your microgrid system needs. Talk with an Expert Smart storage.
