

# Benin Energy Storage System Model Parameters

## Overview

---

Therefore, this article provides data that can be used to create a simple zero order energy system model for Benin, which can act as a starting point for further model development and scenario analysis. energy system modelling in developing countries, thereby causing delays. The data are collected. This report was developed during the EMP-G 2024 capacity-building event, organized by Climate Compatible Growth (CCG), the International Centre for Theoretical Physics (ICTP), the World Bank Group, and Sustainable Energy for All. The training was provided by instructors from CCG and ICTP. With 43% of Benin's population still lacking reliable electricity access [1], this \$300 million initiative aims. In Phnom Penh, Cambodia is advancing its energy storage capabilities through several initiatives: A utility-scale battery energy storage system is being piloted, funded by a \$6. 7 million grant, which is part of a broader effort to enhance the power grid<sup>1</sup>. The data are collected entirely from publicly available and accessible sources, including the.
