

# Can new energy vehicles be used by telecom operators without battery cabinets

## Overview

---

This initiative explored the feasibility of using electric vehicles (EVs) as mobile power sources, supported by AI-driven dispatch planning. Telecom networks rely on consistent power to maintain connectivity, especially during emergencies. In an era where reliable telecommunications infrastructure was critical, Japan's telecom giant NTT DOCOMO, in collaboration with NTT Corporation and Nippon Car Solutions (NCS), launched a ground-breaking demonstration experiment to enhance base station power resilience during outages. This. In telecom—where reliability is essential—hybrid power systems are emerging as a transformative force, revolutionizing how we generate and consume power, specifically in remote and off-grid areas where it is crucial to maintain connectivity. Hybrid power systems integrate multiple energy. Fuel cells are energy-conversion devices that can efficiently capture and use the energy-carrying capacity of hydrogen to power nearly every end-use energy need.
