

# Can photovoltaic panels generate their own electricity Is it safe

## Overview

---

Turning on photovoltaic (PV) panels to generate electricity is generally as safe as using your toaster – if installed and maintained properly. But just like you wouldn't toast bread in a thunderstorm, there are caveats. It is essential to recognize that, like any energy solution, solar energy presents its own set of risks and challenges, including health risks and safety concerns. Solar panels tend to perform best in cold and sunny climates because heat interferes with the conversion of sunlight into electricity. Sunlight is composed of photons, or particles of solar energy.
