

Comparison of floor space for 690V communication power supply cabinets

Overview

This paper will review some of the NEC requirements regarding required electrical space and discuss new product concepts serving to reduce equipment size, resulting in reduced space requirements, reduced installation time, and reduced installation costs. The following topics are discussed: The list below describes typical configurations that could comprise a communications equipment site. See Chapter. Telecommunications spaces are the backbone of structured cabling systems in commercial buildings. Proper sizing and layout are critical for functionality, maintenance, and scalability. Stakeholders such as Facilities Management, the PMO, architects and engineers that design physical pathways for the telecommunications cables. Working space: The front clearance, side clearance, and height clearance requirements for electrical equipment that provide a safe area for maintenance, inspections, and other work.
