

Cost Analysis of Wind-Resistant Photovoltaic Energy Storage Containers for Resorts

Overview

This paper proposes a new power generating system that combines wind power (WP), photovoltaic (PV), trough concentrating solar power (CSP) with a supercritical carbon. Utility-scale solar and wind power are now the lowest-cost sources of additional clean generation in many regions, with cost projections driving investment decisions and policy planning. Key trends in the solar container power systems market include the increasing adoption of hybrid systems that. The challenge is how much the optimal capacity of energy storage system should be installed for a renewable generation. Electricity price arbitrage was considered as an effective way to generate benefits when connecting to wind generation and grid. It consists of a 10 MW PV plant.
