

# Do Beirut's solar panels make money

## Overview

---

As renewable energies become increasingly affordable, there has been a steep increase in solar panel usage (81%) in Lebanon from 2010-2020 (Adbdelnour et al. Diesel energy is about 45 cents per kWh versus solar energy at 9-10 cents per kWh. Faced with chronic shortages from the public supplier Electricité du Liban (EDL), rampant private diesel generator rationing, and high fuel prices and electric bills, Lebanese. Like tens of thousands of Lebanese people, the Mazloums have turned to solar power to generate reliable—and cost-effective—electricity in a country where the crisis-stricken state provides as little as one or two hours of power a day. From left: Roger Mazloum's mother, Odette, in their living room; . Once a niche environmentalist investment, solar panels have become part of the landscape, cluttering roofs, balconies, windows and even Beirut's already-crowded sidewalks. This boom has seemingly plateaued, but with a new. However, the rising costs of fuel imports, the worsening provision of state electricity, and the increased fuel price coupled with the greed by generator owners have exacerbated the unsustainability of the energy structures. These crises combined, specifically, the lack of.

## Do Beirut's solar panels make money

---

### Lebanon's failing state forces unplanned shift to solar power

Some 700 companies are now licensed to install solar, up from 130 in 2020, according to the LCEC. Installations make up 20 per cent of Bitar's revenue.
