

# Electrochemical energy storage power station temperature control equipment

## Overview

---

In this paper, the current main BTM strategies and research hotspots were discussed from two aspects: small-scale battery module and large-scale electrochemical energy storage power station (EESPS). Li-ion battery is an essential component and energy storage unit for the evolution of electric vehicles and energy storage technology in the future. Therefore, in order to cope with the temperature sensitivity of Li-ion battery and maintain Li-ion battery safe operation, it is of great necessary to. What are the energy storage temperature control products?

Energy storage temperature control products refer to mechanisms and technologies designed to manage and regulate the thermal environment of energy storage systems. With global energy storage capacity projected to reach 741 GWh by 2030, keeping these power-packed boxes cool (literally) has become the industry's hottest challenge [2] [4]. These methods regulate temperature through thermal exchange between the battery casing and the environment. Temperature regulation is a key factor in ensuring battery performance and safety.
