

# Energy conservation bangladesh

## Overview

---

In less than a decade, Bangladesh improved energy efficiency by 13. In FY2023-24 alone, fossil fuel consumption of 7 million tonnes of oil equivalent (Mtoe) was avoided, slashing import bills by USD3. International Climate Finance Cell Supported by Improved Coordination of International Climate Finance (ICICF) project, funded by Federal Ministry of Economic Cooperation and Development (BMZ), Germany. Energy efficiency not only helps reduce energy consumption and operational costs but also plays a vital role in lowering greenhouse gas emissions, improving energy security, and enhancing better economic growth and people's life in Bangladesh. After decades of dependency on domestic natural gas, we find ourselves not equipped with sufficient energy resources in our land, and will gradually rely on imported fuels. Also, we are well aware that the use of fossil energy increases. The Energy Efficiency and Conservation Master Plan (EECMP) is a supreme plan of Bangladesh's initiative on energy efficiency and conservation, of which preparation requirement is stipulated in the Energy Efficiency and Conservation Rules (2014).
