

External structure of EK solar inverter

Overview

The solar energy inverter can be divided into square wave inverter, ladder wave inverter, sine wave inverter and combined three-phase inverter according to the waveform modulation method. A solar inverter is an electronic device that changes DC electricity from solar panels into AC electricity, which is the type commonly used in homes and businesses. It's a vital Balance of System (BOS) component and includes functions like Maximum Power Point Tracking (MPPT) and anti-islanding protection. Therefore, understanding the structure and working principle of solar. IT technologies to provide the best in class performance and efficiency in its class. Rated output power is 11 ~ 100kW, wide MPPT range and input voltage are supported. It is a high-quality, high-reliability product with.
