

# Flexible bifacial solar modules

## Overview

---

Bifacial flexible solar panels are photovoltaic modules designed to capture sunlight on both their front and rear surfaces while being thin, lightweight, and bendable to some degree. These panels are crafted from high-purity silicon ingots, resulting in a uniform crystal structure that enhances efficiency and. Bifacial solar panels offer several advantages over traditional solar panels. They tend to be more resilient because both sides are designed to resist environmental degradation due to UV and moisture. This is in. This comprehensive guide covers proper mounting height (0.5 meters for ground-mount), optimal array spacing to maximize rear-side irradiance, electrical configuration for increased current capacity, and site preparation for high-albedo surfaces.
