

# Floating battery energy storage

## Overview

---

Floating energy storage is moving from concept to deployment. With offshore wind and solar scaling quickly, storage systems are needed to smooth variable output and deliver stable power to coastal grids. In 2025, barge-mounted batteries and subsea pumped hydro pilots are setting. A new, floating pumped hydropower system aims to cut the cost of utility-scale energy storage for wind and solar (courtesy of Sizable Energy). Support CleanTechnica's work through a Substack subscription or on Stripe. Combining them with Battery Energy. Putting battery storage systems onto vessels floating off the coast of Singapore could be a good way to mitigate the lack of suitable sites on land, according to the city-state's Energy Market Authority (EMA). 5MWh battery energy storage system (BESS) has been deployed on Floating Living. The advantage of the diesel generating engines of TMI is that they have fast start-up capabilities and can pick up load quickly.
