## Overview

---

**PURPOSE:** This bulletin provides a basic design guide and a reference tool for designing rural substations. Replace previous Bulletin 65-1 with this bulletin and file with 7 CFR Part 1724. This bulletin is available on the Rural Utilities Service website at: . Each substation, whether existing or new, can have different configurations or equipment construction depending on what is needed, and to comply with regulations. Our group is tasked with finishing the substation's design phase according to. ge (38kV and below). They are as follows: Double Bus, Double Breaker Breaker and a Half Ring Bus Double Bus, Single Breaker The arrangement used for a particular substation is determined by. Substations are power stations that include power transformers, potential or voltage transformers, current transformers, electrical bus, breakers, switches, and so on. A substation is a station that includes a power transformer for power conversions either stepping up or stepping down the supply. One of the main goals that every electrical utility company has is transportation of electrical energy from the generating station to the customer, while meeting the following main criteria: • High reliability of power supply • Low energy cost • High quality of energy (required voltage level).
