

# High-efficiency solar-powered containers for farms

## Overview

---

When run efficiently, vertical shipping container farms check a lot of boxes. They use less water, produce fewer emissions (especially if powered by solar), and virtually eliminate agricultural runoff. Essentially, the container protects a controlled environment that is ideal for growing crops, providing a solution for sustainable. Solar-driven agriculture merges solar energy production with farming on the same land. Containers come in sizes like 20 ft, 40 ft, and 45 ft—customizable for different crop volumes and growing setups. Add-ons like water recirculation, solar panels, and remote monitoring boost. It's a QUICK 10 minute phone call! COMPLETE SET UP! RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize.
