

# How many watts does solar energy 20a have

## Overview

---

A 12V 20 amp solar panel's rating of 240 watts stems from this standardized testing. This rated power signifies the maximum output the panel can generate. Yet, in real-world applications, factors like temperature can substantially affect performance. This output is derived by multiplying the voltage (12V) by the current (20A), 3. 20A. Max solar input voltage is 100VDC. (I am charging a 12v LiFePO4 battery) Does this mean I can't use more than 260 watts worth of panels?

I recently purchase three (3) of the BougeRV, 180w, 9bb panels. I was planning to use two of them for charging. Below is a table showing which size of charge controller you should get based on the power rating and the number of solar panels in your array. But remember, that's under test conditions.
