**2MW / 5MWh**  
**Customizable**

## Overview

---

A typical solar battery stores around 10 kilowatt-hours (kWh) of energy. To ensure grid independence, you might need two to three batteries to meet your energy usage when solar panels aren't producing power. One battery can supply backup power during outages, enhancing cost-efficiency and energy. One of the most common questions we hear at New York Solar State Farm (NYSSF) is: How much energy can a battery storage system actually store?

In this blog, we'll help you understand how battery storage capacity works, what it means for your home, and how NYSSF can help you choose the right system. Solar energy storage capacity varies significantly based on multiple factors, including the type of storage technology used, the capacity of solar panels, and local environmental conditions. Knowing how much energy they can store helps you determine how much power you can rely on when the sun isn't shining. For grid backup. Solar energy storage capacity can be quantified effectively through various metrics, 1.
