

# Installation requirements for track-mounted photovoltaic panels

## Overview

---

They are required to be not less than 36 in. (914 mm) wide and run from the gutter to the ridge. Install a mounting system for solar thermal or solar photovoltaic panels. Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along. When installing photovoltaic panels on one- and two-family homes, it's important to understand the requirements for access pathways and the requirements for setback from the ridge, which only apply to roofs with a slope greater than a 2-in-12 pitch. Access pathways are intended to provide access to. The Renewable Energy Ready Home (RERH) specifications were developed by the U. Bottom line-- you need to have a listed solution to all of these. This tip sheet reflects code requirements of the 2021 International Residential Code (IRC) and the 2021 International Fire Code (IFC) with Washington State Amendments, and provides information on the installation of Photovoltaic (PV) systems in single family homes, two-family homes, and townhouses.
