

# Installing solar photovoltaic power generation has radiation

## Overview

---

Photovoltaic (PV) power generation works by using the photoelectric effect of semiconductor materials to convert sunlight directly into electricity. These waves include radio waves, microwaves, infrared, visible light, ultraviolet rays, X-rays, gamma rays, and more, spanning a wide range of frequencies from low to high. In our. As solar energy adoption grows globally, many homeowners wonder: is there radiation when installing photovoltaic panels on the roof?

Let's cut through the noise. Solar panels produce minimal electromagnetic fields (EMF) - far below international safety thresholds. Only excessive radiation can harm the human body and potentially cause cancer. Ionizing radiation and non-ionizing radiation differ in their ability to remove electrons from atoms or molecules, a process known as "ionization. Sunlight is composed of photons, or particles of solar energy.
