

Invest in solar and wind power projects

Overview

The investors on this list have actual renewable energy portfolios, understand project finance, and know why your Series A might take 18 months instead of 6. Here's who's writing checks in 2026, what they've funded recently, and how to actually reach them. According to a June 2025 report from Lazard, renewables like solar energy are the cheapest source of power on the market. This cost-effectiveness may present enticing investment opportunities for some but, like any venture, investing in solar power requires a solid grasp of the industry. What you. Though natural gas remains the dominant fuel source for US power generation (accounting for around 35% of generation in the first quarter of 2025), the overwhelming majority of new capacity additions have been concentrated in renewable energy, including solar, wind, and battery storage. Electricity generated by the large wind turbines that dot the landscape across North America has quickly become a key part of the energy grid and will likely grow in importance over the years to come.
