

Is it dangerous to connect China's communication base station inverter to the grid

- ☑ High energy density and long cycle life
- ☑ Modular structure

- No need to replace the battery
- Shorter charging time
- Meets 99% EV car

Overview

Undisclosed communication devices found in have raised serious national security concerns. officials warn these parts could allow remote interference with the power grid, risking blackouts or even system collapse. Not listed in product documentation, these shadow components create hidden backdoors that can circumvent utility firewalls and allow. Officials are reportedly reassessing the risk posed by Chinese-made devices found in solar panels that are capable of damaging the energy infrastructure, destabilizing the power grid and triggering widespread blackouts.
