

Is it okay to install photovoltaic panels on the west side of my house

Overview

If your roof faces west, you can still install solar panels. West-facing solar panels lose about 10% to 15% of their annual energy production—though the loss could be as high as 20% if you don't have the right roof pitch for solar panels. Installing solar panels on a west-facing roof is a practical choice for many American homeowners seeking to maximize afternoon and evening energy use. This article explains how west-facing arrays perform, key installation considerations, cost and ROI expectations, and practical tips to optimize. Most solar panels are oriented so they face south, but they'd be more useful to nation's utilities if more of them faced west and helped with peak power needs in the late afternoon. You'll also need to choose the right panel type based on your energy. In the Northern Hemisphere, the south side of a house is the best location for solar panels, because it is the side that receives the most direct sunlight. The panels should be installed at an angle that is equal to the latitude of the location, so that they can receive the maximum amount of. Here's a surprising reality: Two identical homes on the same street install the exact same solar system on the same day—identical panels, same size, same installer. Yet after 25 years, one homeowner saves \$18,000 while their neighbor saves only \$15,000. The difference?

Just three degrees of panel.
