

# Is it okay to install photovoltaic panels vertically

## Overview

---

The short answer is yes, you can mount solar panels vertically. The ideal solar panel orientation is angled facing the sun, typically south-facing in the northern. Can solar panels be mounted vertically, and if so, what are the advantages and trade-offs?

The short answer is yes—solar panels can be mounted vertically. Vertical mounting involves. Vertical solar panels are photovoltaic solar installations mounted on vertical surfaces, contrasting with traditional panels that are inclined on rooftops. It's important to consider your roof shape and available space when choosing the orientation. The number of panels that can be mounted vertically will be limited by how much weight their rack can handle, the same is true for horizontal.
