

Is it profitable to install photovoltaic panels outdoors

Overview

Solar farming can be profitable, with average returns of 10-15% annually. Initial setup costs range from \$800 to \$1,200 per kW of capacity while operating costs are typically low. Revenue depends on local energy prices and solar irradiance levels. Installing solar panels is a long-term investment that can pay for itself through utility bill savings. While the initial setup cost can be high. A solar farm is a big installation where we can see multiple photovoltaic (PV) panels that convert sunlight into electricity. This is on par with or cheaper than traditional plants in many regions, with a typical 11 kW residential system sticker price of \$29,000, or \$20,500 after applying federal and state tax credits. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up.
