Is it safe to lay photovoltaic panels on the roof

SOLAR PRO.

Overview

Let's clear the air — the overwhelming consensus among scientists and engineers is that solar panels are generally safe. While myths around solar panel radiation risk circulate online, there is no evidence proving that rooftop solar systems cause harm to people living underneath. Solar panels offer a compelling mix of environmental benefits and financial incentives. Research from the University of California-San Diego in 2023 shows a roof with solar panels has its daylight temperature drop by an average of 5 degrees Fahrenheit because panels absorb the heat rather than the roof itself, and less heat is transferred through the roof into the home. Concerns about leaks, voided warranties, or long-term structural damage are common.
