## Overview

---

One of the biggest drawbacks in the information transfer theory is the impact of noise in the signaling accuracy. Abstract—Neuromorphic computing leveraging spiking neural network has emerged as a promising solution to tackle the security and reliability challenges with the conventional cyber-physical infrastructure of microgrids. A microgrid is a group of interconnected loads and distributed energy resources that acts as a single controllable entity with respect to the grid. It can connect and disconnect from the grid to. Abstract: We present a new noise-resilient secondary control scheme for voltage and frequency synchronisation of an autonomous microgrid (MG).
