

Kiribati Regular Energy Storage Power Supply

Overview

But here's the kicker: rising sea levels threaten 70% of Kiribati's habitable land by 2040, making their energy transition literally a race against time. Completed in Q1 2025, this 3.5MW/14MWh facility combines lithium-ion batteries with AI-driven energy management. As global interest in renewable energy grows, energy storage systems (ESS) are becoming critical for stabilizing power grids and integrating solar/wind. The Vision of the Kiribati National Energy Policy is "available, accessible, reliable, affordable, clean and sustainable energy options for the enhancement of economic growth and improvement of livelihoods in Kiribati"; 45/kWh while emitting 58,000 tonnes of CO₂ annually [4].
