

# Large photovoltaic panel installation grounding wire

## Overview

---

Always use #6 AWG bare copper wire for outdoor grounding to meet National Electric Code requirements and pass inspections. This simple yet critical detail can save you time, money, and headaches down the road. Not doing so can lead to static discharge and lightning strikes that destroy the solar panel, inverter, battery and charge controller. However, the grounding process and methods differ slightly, offering. Properly grounding solar PV systems is one of the most critical aspects of a safe and reliable installation, governed by Part V of NEC Article 690. This process involves two distinct but related concepts: system grounding, which connects current-carrying conductors to the earth for voltage. There are several key grounding codes and standards you should consider when undertaking any solar panel project.
