

Lifespan of wind power energy storage equipment

**200kWh
Battery Cluster**

Overview

The short version is that modern onshore turbines are typically designed for 20 to 25 years and increasingly modelled for 25 to 30 years. Many wind farm assets are capable of safe life extension well beyond the original design life if they're well-sited, diligently maintained and. With an average lifespan of 25 years, a high proportion of wind turbines across the world are approaching retirement. One of the most popular ways to store wind energy is in batteries. Lithium-Ion Batteries: Known for their high energy density and efficiency. Wind energy is among the fastest-growing renewable energy sources worldwide.
