

# Machinery for transporting solar panels to the roof

## Overview

---

To lift solar panels onto your roof, you can use a ladder railing system, a pulley system, a lifting bag, or even DIY lifting systems using a pulley. Carrying them up the ladder can also be done with products like the solar panel caddy, and all of these ideas will make this task. Installing solar panels on your roof isn't just about securing them in place—it's also about getting them up there without breaking your back (or the panels). If you're planning to DIY your solar project, make sure you consider this part of the process. Below, we outline the safest and most. The Fluke Module Lift™ is designed to safely and quickly transport a PV module to a roof, streamlining the installation process of solar panels. RGC's new Platform Hoists are engineered for heavy-duty lifting, offering increased capacity and stability for solar installation teams. The limited warranty is in effect for Six (6) months from date of purchase. The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder.

## Machinery for transporting solar panels to the roof

---

### Solar Panel Lift

Specially designed with a custom carrier that functions as a cargo receptacle, GEDA's solar panel lift is a space-saving way to reach inaccessible loading areas.

### How To Lift Solar Panels Onto Roof
