

New Energy Wind Energy Storage Photovoltaic

Overview

A new, floating pumped hydropower system aims to cut the cost of utility-scale energy storage for wind and solar (courtesy of Sizable Energy). Support CleanTechnica's work through a Substack subscription or on Stripe. This year's sharp U-turn in federal energy policy is a head-scratcher for any. Now, enter perovskite solar cells—lightweight, flexible, and cheaper alternatives that are causing a revolution in the solar industry. Hailed as the future of solar technology, they are the most likely candidates to increase efficiency and reduce costs without remodeling existing infrastructure. For instance, companies like Rondo Energy are transforming electricity into heat, storing it in specially designed bricks, which can then provide industrial.
