New energy testing site

PacWave: Offshore Wave Energy Test Site

PacWave is an Energy Department-funded, grid-connected, full-scale test facility for wave energy conversion technologies.

Wave energy test site nears completion off the Oregon Coast , kgw

The site will be the first utility-scale, grid-connected wave energy test site in the United States -- providing valuable data on how to harness the ocean's power.

Oregon has a massive new wave energy testing facility. But who is ...

After more than a decade of planning, permitting, community outreach, drilling, cable-laying and construction, Oregon is now home to the largest-capacity wave energy testing facility in the

PacWave - TESTING WAVE ENERGY FOR THE FUTURE

PacWave, based at Oregon State University, is helping the marine energy industry test new ideas and develop the technology to harness wave energy. PacWave is an open ocean wave energy testing ...

Renewable Energy Testing , Ohmsett

Ohmsett is a venue for innovation and technology assessment for marine energy systems and technology for the blue economy.

BPA will buy wave-energy power generated at Oregon coast test site

By the fall of next year, Oregon State University's new wave-energy testing facility off the coast of Newport could be kicking out its first volts of electricity as companies begin testing

Wave Energy Devices Will Soon Head to New Testing Facility--But They

Two researchers have determined cost-effective ways to purchase these strange, alien legs dropping down to the

seafloor--also known as moorings--for a new wave energy test facility currently under ...

How U.S. Marine Energy Test Sites Are Driving Innovation

The pier extends 1 kilometer into waters approximately 12 meters (40 feet) deep, providing ample space and depth for a range of marine energy technology testing. Positioned along a critical stretch of the ...

Our Lifepo4 batteries can beconnected in parallels and in series for larger capacity and voltage.

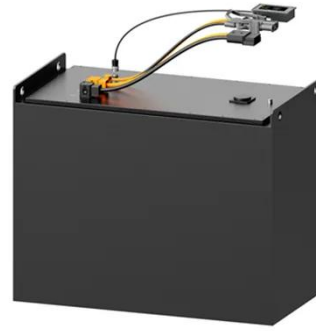

PacWave is building the biggest wave energy test facility in the world

The vault, cables, a subsea pod, and wave testing devices are all part of PacWave, an Oregon State University (OSU) test site that will be used by companies developing technology to convert energy ...

Construction underway at Oregon test facility focused on wave ...

PORTLAND, Ore. (KOIN) -- In the coming

week, workers will install power and data cables for Oregon State University's new testing facility, which will allow researchers to develop new ways to
