

# Ordinary solar inverter

## Overview

---

Ordinary inverters are independent devices, lack a built-in controller, and have no hybrid grid connection function. They are mostly applied to power supply systems that do not involve solar panels. In addition, solar inverters are also known as off-grid inverters or hybrid. The main difference between ordinary inverters and solar inverters lies in their primary function and how they are used: Ordinary Inverters: They convert DC (direct current) power from batteries or other sources into AC (alternating current) power for everyday use. Inverters are found in nearly every solar installation, from small residential systems to large utility-scale plants, typically mounted near the main service panel, in a garage or directly beneath the panels. Today, most new photovoltaic (PV) installations. The inverter is a super important part of your solar setup, changing solar energy into electricity your home can use.
