

PV inverter parameter adjustment

Overview

This guide provides essential steps for setting up a solar inverter, including choosing the right inverter for your system, selecting a location for the inverter, and setting parameters like input voltage, output voltage, frequency, and power factor. If this parameter is set to Enable, the inverter responds to the scheduling instruction from the remote port. When sizing the array voltage (number of modules in series), this should be taken at "usual" operating conditions defined as sizing temperatures in the project (around 50°C in summer and 20°C in winter). In addition, the datasheet specifies the maximum voltage value of the inverter.
