In order to promote the commercial application of distributed energy storage (DES), a commercial. The most basic earnings: users can charge the energy storage battery at a cheaper valley tariff when the loads are at the low valley, and at the peak of the loads, the energy storage battery will supply power to the loads to realize the transfer of the peak loads, and obtain earnings from the peak. Through case simulations, it is demonstrated that the point-to-point commercial model is beneficial for both shared energy storage and users.
