

Photovoltaic bracket anti-fracture performance test

Overview

The simulation model of fixed photovoltaic bracket is established by ABAQUS, and the numerical simulation results are compared with the test results. These tests apply only to complete systems with a defined load. The methodology includes testing the system outdoors in prevailing. PV support brackets play a crucial role in solar power systems, providing structural support for photovoltaic panels. They need to withstand various environmental forces such as wind, snow, and seismic activity over their service life. By dropping a weighted impact bag from an adjustable height onto the module surface, it simulates mechanical shocks that modules may experience during transportation.
