

Photovoltaic grid-connected energy storage device

Overview

Grid-connected storage systems require specific power electronics, including hybrid inverters, battery chargers, and energy management controllers. Manufacturers usually provide integrated solutions, making exact modeling of device-specific behavior complex. In PVsyst, for all strategies the PV system is defined as a standard grid-connected system, with usual solar inverters. The battery pack is unique (centralized). The delivery of the stored energy is. A grid-connected converter is the interface between renewable energy power generation systems, such as solar power generation, wind power, hydropower, etc. The objectives of such hybrid systems vary depending on the application, for example: Maximizing self-consumption: minimizing reliance on grid electricity regardless of tariffs.
