

Photovoltaic panel back lock hole

Overview

These mounting holes are typically located in the frame on the back or sides of the panel, not on the glass or the back sheet itself. By utilizing these pre-drilled holes, the installation system can safely anchor the solar panels without damaging the internal. Most modern solar panels feature pre-drilled holes in their aluminum frames. Different mounting systems exist, including roof-mounted, ground-mounted. What is the deal with the near worthless mounting holes on solar panels?

I've stared at these for a long time and made mounts, but how exactly are these types of holes actually intended to be used?

They're practically blind holes which are seemingly unnecessarily difficult to use, particularly on. Most solar panels come with mounting holes pre-drilled on the back frame, specifically designed to facilitate secure attachment to various mounting systems. Are 4 bolt sufficient?

I can understand with front clamp mounts - yes 4 bolts are usually ok. But with the thin aluminum frame at the back - even with a substantial washer - I think that could be ripped. Whether you're troubleshooting shade issues or upgrading to bifacial panels, knowing how to safely remove these locks is crucial. Did you know 23% of solar panel performance issues stem from improper component handling?

Let's crack this nut without breaking a sweat (or your panels) Why Bother With.
