## Overview

---

Solar panels can be known as solar cell panels, or solar electric panels. PV cells are made of materials that produce excited electrons when exposed to light. These electrons flow through a circuit and produce direct current. Whether you're shopping for home solar panels, solar panels for your business, or a community solar project, knowing these terms will help you go solar with confidence. Most homeowners save around \$60,000 over 25 years.

**Gigawatt (GW):** We measure the cumulative capacity of community solar nationwide. Our solar energy glossary offers a collection of key terms and phrases, explained simply and concisely. A type of electrical current that circuits and appliances in most homes utilize. Efficiency, durability, and cost improvements have helped the technology advance significantly in recent years.
