

# Photovoltaic panels direct current water heating

## Overview

---

The results show that the electrical energy produced by the PV solar panels can be used directly for water heating. For the direct PV power supply, the average total efficiency is 12%; with the MPPT, the average value is 18. However, there are important factors like voltage, power. In this study, an experimental device is developed and implemented to evaluate the process of heating water using photovoltaic solar energy in direct current. Tests were carried out. California-based Apparent Inc. US-based. Setting up a hot water heating system in Hawaii, where freezing temperatures are not a factor but the degradation of a thermal solar tank on the roof doesn't last is, and is too much weight for the area we want to install it.
