

Reduced carbon emissions lima

Overview

LIMA aims to reduce carbon emissions by 2.5% year-on-year for the next 10 years aligned to UN targets. Lima is advancing its Climate Action Plan amid rising transport emissions, congestion, and poor air quality driven by car-dependent development. With transport responsible for 27% of emissions and limited cycling and pedestrian infrastructure, the city faces mounting pressure to adopt cleaner, more. Lima, the capital of Peru, has a growing awareness of environmental sustainability and has been taking strides towards a greener future. If action is not taken to reduce these emissions, they are likely to increase by 200 per cent by 2050, primarily due to rising traffic volumes and the spread of urbanisation.

Reduced carbon emissions lima

Carbon reduction plan
