

# Reduced carbon emissions podgorica

## Overview

---

New pedestrian zones, bike lanes, and open-air recreational venues are emerging, encouraging citizens to spend more time outdoors, reducing dependence on motor vehicles and consequently, lowering carbon emissions. Demonstrating financial viability with positive returns from energy savings, reduced CO2 emissions, and improved public spaces. Podgorica is increasingly exposed to climate risks such as heatwaves, droughts, heavy rainfall, and flooding, with urban development intensifying the urban heat island. Podgorica is the largest urban agglomeration and the administrative capital of Montenegro. For comparison, two index lines (1990 value = 100) are included: the first refers to country specific emissions, while the second expresses total EU. Understanding how our climate is changing, and the potential impact, is of key importance for directing future activities that we need to implement to further reduce greenhouse gas emissions. To be able to rise to challenges of rapid urbanisation which often goes hand in hand with environmental degradation - we need a new.

## Reduced carbon emissions podgorica

---

### **Climathon Podgorica , United Nations Development Programme**
