

Sao tome and principe climate change

Overview

The country faces significant challenges in the face of climate change including land degradation caused by commercial logging, unsustainable agriculture and competing demands for food, energy, and space, and increasing ocean acidification, coastal floods, and marine degradation. Despite its small size, São Tomé and Príncipe reaffirms its commitment to the Global Climate Agenda as a global response to the climate crisis. As a small developing country, it is particularly vulnerable to the effects of global warming, which have been manifesting in various detrimental ways. 32 megatonnes of CO₂-equivalents, a negligible share of the global total.
