

Self-service solar power generation

Overview

The self-generating and self-consuming solar power system is designed to optimize solar energy sources, helping users make the most of the electricity generated without depending on the national grid. But these systems are also used by people who live near the grid and wish to obtain independence from the power. Self-supply refers to when the consumer is generating and supplying their own green power. How Does Self Supply Work?

Self-supply arrangements can be structured in a number of ways. With advancements in technology, self-sufficient energy systems are becoming more efficient and affordable, making them a viable option for many. This is a model that many households and businesses are interested in thanks to its ability to utilize.
