

Solar generator progress

Overview

In 2024, generators added a record 30 GW of utility-scale solar to the U. We expect this trend will continue in 2025, with 32. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48. 6 GW of capacity was installed, the largest. Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the second half of the year, according to our latest survey of electric generating capacity changes. Renewables now dominate new power generation capacity, while new domestic clean energy manufacturing facilities are popping up around the nation. Several challenges persist. Portable solar generators offer a green solution for powering up during electrical outages or off-grid excursions.
