

# Solar on-site energy storage system

## Overview

---

Solar energy storage involves gathering excess energy from a solar panel system and storing it in another form for later use. Many facilities have recognized the advantages of on-site renewable energy. Generate and store renewable energy with a solar and battery storage system at your facility to reduce energy costs, earn incentive payments, and improve corporate sustainability and resilience. With customizable power modes, you can optimize your stored.

Virtual Storage

The most common type of energy storage in the power grid is pumped hydropower. But the storage technologies most frequently coupled with solar power plants are electrochemical storage (batteries) with PV plants and thermal storage (fluids) with CSP plants. Other types of storage, such as compressed air storage and flywheels, may have different characteristics. See more on [energy.gov](http://energy.gov).
