

# Solar photovoltaic panel starts small motor

## Overview

---

Try charging an electrolytic capacitor with the solar panel before connecting the motor - something like 470uf/10V (a 1000uf is OK too). Conversion of solar energy into electricity is fundamental, where photovoltaic cells within the panels capture. why wont my dc solar panel power a small dc motor when the output volts and amps are higher than the battery that does power it?

why wont my dc solar panel power a small dc motor when the output volts and amps are higher than the battery that does power it?

Likely not enough power to start the. To start a solar-powered motor, you will need a solar panel, a DC motor, a Maximum Power Point Tracker, a DC motor controller, and a battery (optional). In this video, the author demonstrates. Solar panels are a sustainable means of energy production that can be used to power just about anything, be it your home, RV, boat, or even motors. A DC motor consists of two main parts: the stator and the rotor, which is sometimes also called the armature.
