

Subsidies for new energy storage power stations in Ukraine

Overview

The Ukrainian government abolished VAT and import duties on both solar modules and battery storage equipment, initially in July 2024 and since extended through 2028. The European Bank for Reconstruction and Development (EBRD) is supporting Ukraine 's energy security by lending €22. Repeated Russian attacks on power infrastructure have accelerated Ukraine's efforts to decentralize its grid by expanding the use of distributed energy sources such as batteries, solar, and wind. At least €3 billion of support for energy security has already been provided to Ukraine since Russia's full-scale invasion, via the Ukraine Energy Support Fund and the Union Civil Protection Mechanism, among others.
