

# The bracket under the solar heating tube

## Overview

---

The standard on roof panel mounting system is constructed of stainless steel brackets that are fitted underneath the solar thermal panels. They secure permanently to stop vibration. This eliminates movement in tubing that could. The most common way to install solar thermal collectors is to mount them directly onto your property's rafters using specialist roof hooks, mounting frames and clamps. If your property has more than one story, you may need to hire scaffolding (at an extra expense) in order to gain roof access. n instructions for OVSOL System for solar domestic hot water heating.
