When was solar energy first used?

When were solar panels invented?

Though solar energy has found a dynamic and established role in today's clean energy economy, there's a long history behind photovoltaics. Long before the first Earth Day was celebrated on Ap, generating awareness about the environment and support for environmental protection, scientists were making the first discoveries in solar energy. It all began with Edmond Becquerel, a young physicist working in France, who in 1839. The history and evolution of solar energy is a fascinating journey that spans from ancient civilizations to the high-tech solar panels we see today. This journey is not just about technology, but also about human ingenuity and our constant strive to harness nature's immense power for our use. Today's rooftop installations trace their lineage through brilliant inventors, accidental discoveries, and Cold War space races—transforming. The discovery of the photovoltaic effect in 1839 laid the groundwork for today's solar panels, but it would take many decades of innovation to transform this novel concept into the high-efficiency energy source we know today.
